

(Partie 1)

$$\text{Aire Polygone 1} = \frac{3 \times 6}{2} \times 4 = 2 \times 3 \times 6 = 36 \text{ cm}^2$$

$$\text{Aire Polygone 2} = (20 + 12) \times \frac{15}{2} = 16 \times 15 = 240 \text{ cm}^2$$

$$\begin{aligned} \text{Aire Polygone 3} &= (10 + 6) \times \frac{\sqrt{8^2 - 2^2}}{2} = \frac{16}{2} + \sqrt{60} \\ &= 8 + \sqrt{60} \\ &= 61,97 \text{ cm}^2 \end{aligned}$$

(Partie 3)

$$S_2 = 2 \times S_1 = k^2 \times S_1$$

Donc le coefficient k d'agrandissement est tel
que $k^2 = 2$, donc $k = \sqrt{2}$

$$\text{Donc } c_1 = 10 \times \sqrt{2} \approx 14,14 \text{ cm}$$

$$c_2 = 12 \times \sqrt{2} \approx 16,97 \text{ cm}$$

$$c_3 = 16 \times \sqrt{2} \approx 22,63 \text{ cm}$$
